

# Establishing a Remote Patient Monitoring (RPM) Program for Readmission Prevention

## SUMMARY

Same-cause hospital readmission is a costly problem that also creates a large burden on patients, families, and caregivers.

A well-designed and well-implemented remote patient monitoring program can dramatically reduce readmissions with an ROI of at least 10:1 for some conditions. This engagement will enable you to design and launch an effective readmission prevention program.

## PROCESS

We will work with your clinical, operational, administrative, and technical leadership to create a tailored program that addresses:

- 1) Strategic, Clinical and Business Case Development
- 2) Clinical, Operational, and Administrative Workflow Design
- 3) Technology Specification and Vendor Selection
- 4) Operationalization (including performance management, legal/regulatory compliance, billing, training, operational & technical support, marketing, etc.)
- 5) Proof-of-Concept (including design improvements, assumption validation, etc.)
- 6) Program Implementation (including training, deployment, organizational change management, etc.)"

## CUSTOMIZATION OPTIONS

This engagement can be structured as Advisory, Collaborative or Managed:

A) Advisory: "We'll guide you"; B) Collaborative: "We'll do it with you", or Managed: "We'll do it for you"
